

Module-2 (Assignment Day-5)

1. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

- 1) Press Windows + R.
- 2) Type **msinfo32** and press Enter.
- 3) The System Information window will open.
- 4) Under System Summary, find:
 - OS Name / Version – your Windows version
 - Processor – your CPU
 - Installed Physical Memory (RAM)
- 5) Take a screenshot using **Windows + Shift + S**.
- 6) Make sure the screenshot clearly shows all three details, then save it for your assignment.

2. Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or Balena Etcher to create a bootable USB drive for installation.

Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Steps to Make a Bootable Linux USB:

- 1) Download the **Ubuntu ISO file** from the official Ubuntu website.
- 2) Insert an **8 GB or bigger USB drive** into the computer.
- 3) Download and open **Rufus**.
- 4) Select your USB drive in Rufus.
- 5) Click **Select** and choose the Ubuntu ISO file.
- 6) Click **Start**.
- 7) Rufus will show a warning that the USB will be erased. Click **OK**.
- 8) Wait for the process to finish.
- 9) When Rufus shows **Ready**, the bootable USB is complete.

3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Hint: Find 'Language & Region' in System Preferences to add or change languages.

Steps on macOS:

1. Open **System Preferences** from the Apple menu.
2. Click **Desktop & Screen Saver**.
3. Choose any wallpaper you like. The desktop background will change.
4. Go back to **System Preferences**.
5. Click **Language & Region**.
6. Click the **+** button under Preferred Languages.
7. Search for **Hindi** or **Gujarati** and add it.
8. Select the language and choose **Use Hindi** or **Use Gujarati** if macOS asks.
9. Restart or log out if needed to apply the language change.

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

Steps:

1. Install **Ubuntu** on your computer or in **VirtualBox**.
2. During installation, create a new user account with the name **gamer**.
3. Finish the Ubuntu installation and restart the system.
4. Open **Settings** → **System** → **Users**.
5. Click **Unlock** and enter your password.
6. Select the **gamer** account.
7. Turn on **Automatic Login**.
8. Restart Ubuntu and check that it logs in automatically as **gamer**.
9. Take a screenshot showing the **gamer** username on the login screen or user selection screen.

5. Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

Windows 10 Installation Guide:

- 1) **Back up your files** – Save important photos, documents, and other files to another drive or cloud storage.
- 2) **Create a Windows 10 USB** – Use a Windows 10 ISO and a tool such as Rufus to make a bootable USB.
- 3) **Start from the USB** – Insert the USB, restart the laptop, and open the boot menu (often **F12, F9, Esc, or F2**).
- 4) **Start installation** – Choose your language, time, and keyboard, then click **Install now**.
- 5) **Choose the installation type** – Select **Custom: Install Windows only** for a fresh installation.
- 6) **Partition the drive** – If it is a new/empty drive, you can delete old partitions and create a new partition for Windows. Keep a separate partition for personal files if you want. **Do not delete partitions containing important data.**
- 7) **Install Windows** – Select the partition where you want Windows installed and click **Next**.
- 8) **Wait for installation** – The laptop will restart several times. Remove the USB when Windows starts from the internal drive.
- 9) **Set up Windows** – Create your user account and choose your basic settings.
- 10) **Check privacy settings** – Review options such as location, diagnostics, advertising ID, and activity history. Turn off anything you don't need.
- 11) **Install updates** – Go to **Settings → Update & Security → Windows Update** and check for updates.
- 12) **Install drivers** – Check the laptop manufacturer's website for missing drivers, especially graphics, Wi-Fi, and chipset drivers.
- 13) **Restart the laptop** after updates and drivers are installed.

Steps that may be unclear:

- **Partitioning:** It can be confusing to know which partitions are safe to delete. If the drive already contains files, don't delete partitions unless you have a backup.
- **Boot menu key:** The key is different for each laptop, so the manufacturer's instructions may be needed.
- **Windows 10 support:** Windows 10 reached **end of support on October 14, 2025**, so for a new installation in 2026, Windows 11 is generally the better choice if the laptop supports it.
